

# MODULAR SUBSTATION

## SERVICE

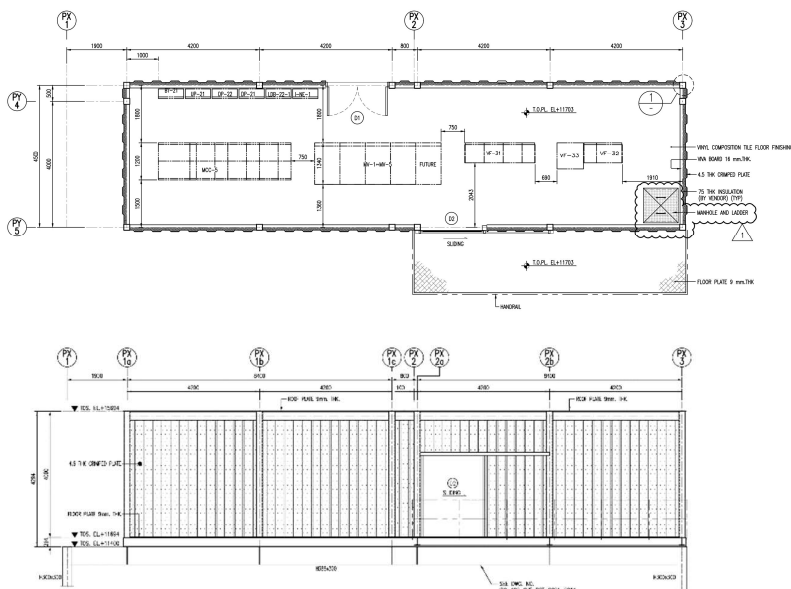

FEB 2020

Substations are the critical & important part of the electrical distribution system designed to perform other essential functions including protection, monitoring, and switching.

The modular substations allow for the equipment to be factory installed and pre-commissioned off site which allows simple onsite civil works, installation and commissioning.

Cost & Space saving, Flexibility, and Short lead times are primary advantages of Modular Substations

“ One of the most important and distinctive features of MDICOT's Modular Substations is creating unique and fully CUSTOMIZABLE solution, in accordance with client's individual specifications, the environmental requirements, the environmental conditions and the project-specific transport size limitations. ”
